## ALKANOIC ACID DERIVATIVES AND HERBICIDAL COMPOSITIONS

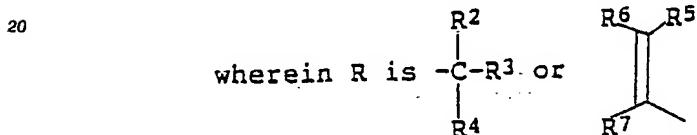

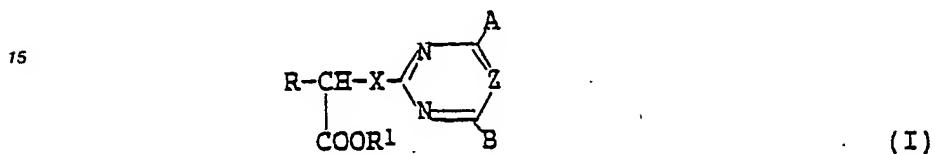

The present invention relates to novel alkanoic acid derivatives and herbicidal compositions containing them, which are useful for application to paddy fields, and upland fields and non-agricultural fields.

In recent years, many herbicides have been developed and practically used, and they have contributed to the improvement of productivity and to energy saving for agricultural works.

For example, European Patent 262,393 discloses N-(1-cyano-1,2-dimethylpropyl)-2-pyrimidinyl oxypropionamide. However, this is concerned with an agricultural fungicide. Further, German Laid-open Application No. 2,314,160 discloses 2-[4-chloro-6-(4-chlorobenzyl)aminopyrimidinyl]thio propionic acid as a 2-pyrimidinylthio acetic acid derivative, which exhibits anticholesteremics.

However, such conventional herbicides have various problems with respect to the herbicidal effects and safety in their practical application. Therefore, it has been desired to develop a herbicide having improved herbicidal effects and safety to crop plants.

## TEST EXAMPLE 2

In a pot filled with soil (surface area: 100 cm<sup>2</sup>), seeds of barnyardgrass (Ec), crabgrass (Di), smartweed (Po), slender amaranth (Am), lambsquarters (Ch) and rice flatsedge (Ci) were sown and covered with soil in a thickness of from 0.5 to 1 cm. One day later from the seeding, a predetermined amount of a wettable powder prepared in accordance with Formulation Example 1, was diluted with water and applied to the soil surface at a rate of 100 liters per 10 acres (dose of active ingredient: 400 g/10 acres). The evaluation was conducted on the 20th day after the treatment in accordance with the standard as identified in Table 3. The results are shown by the index numbers in Table 5.

In a pot filled with paddy field soil (surface area: 100 cm<sup>2</sup>), seeds of barnyardgrass (Ec), flatsedge (Cd), monochoria (Mo) and bulrush (Sc) were sown, and water was introduced to a depth of 5 cm. Two days later from the seeding, a predetermined amount of wettable powder prepared in accordance with Formulation

Example 1, was diluted with water and dropwise applied to the water surface in a dose of 100 g of the active ingredient per 10 ares. The evaluation was conducted on the 21st day after the treatment in accordance with the standard as identified in Table 3. The results are shown by the index numbers in Table 6.

## TEST EXAMPLE 4

In a pot filled with soil (surface area: 600 cm<sup>2</sup>), seeds of barnyardgrass (Ec), green foxtail (Se), Johnsongrass (So), blackgrass (Al), smartweed (Po), slender amaranth (Am), lampsquaters (Ch) and cotton (Go) were sown and covered with soil in a thickness of from 0.5 to 1 cm. Two days later from the seeding, a predetermined amount of a wettable powder prepared in accordance with Formulation Example 1 was diluted with water, and applied to the soil surface at a rate of 100 liters per 10 ares. The evaluation of the herbicidal effect was conducted on the 20th day after the treatment in accordance with the standard as identified in Table 3, and the evaluation of the phytotoxicity was conducted in accordance with the standard as identified in Table 7. The results are shown by the index numbers in Table 8.
